<i>About the author</i>	xiii

Part I A theoretical and pragmatic approach for VR headsets

I Introduction and challenges	3
2 Concepts of virtual reality	9
2.1 Definitions of virtual reality	9
2.1.1 Purpose of virtual reality	9
2.1.2 Functional definition	10
2.1.3 Technical definition	10
2.2 Fundamental approach for immersion and interaction	12
2.2.1 The hierarchical 3-level model	12
2.2.2 The behavioural software aids	18
2.3 Immersion and presence	19
3 Human senses	23
3.1 Introduction	23
3.2 Vision	25
3.2.1 The human visual system	25
3.2.2 The eye	25
3.2.3 Accommodation and vergence	26
3.2.4 The retina	27
3.2.5 Vection and illusions of self-motion	28
3.2.6 Visual perception of depth	28
3.2.6.1 Cognitive perception by monocular cues	28
3.2.6.2 Convergence and retinal disparity	31
3.2.6.3 Binocular vision and diplopia	33
3.2.6.4 Neurophysiological mechanisms of the perception of depth	34
3.2.7 Psychophysical characteristics of vision	34
3.2.7.1 Visual acuity	34
3.2.7.2 Visual field	35

3.2.7.3	The Interpupillary Distance	36
3.2.7.4	Power of accommodation	36
3.2.7.5	Maximum temporal frequency in vision	36
3.2.8	Psychophysical characteristics of stereoscopic vision	36
3.3	Cutaneous sensitivity	38
3.3.1	The skin	38
3.3.2	Classification of biological sensors	38
3.3.3	Density of distribution	39
3.3.4	Classification of mechanoreceptors	39
3.4	Proprioception	40
3.4.1	Vestibular system	40
3.4.2	Articular proprioception	40
3.4.3	Muscular proprioception	41
4	Visual interfaces	43
4.1	Introduction	43
4.2	Processes for the visual perception of the 3D space	44
4.3	Visual interfaces with fixed support	46
4.3.1	Monoscopic or stereoscopic computer screens	46
4.3.2	Separation at the screen level	46
4.3.3	Large screen projection systems	48
4.3.4	Wearable visual interfaces	50
4.4	Stereoscopic restitution of vision	50
5	VR headsets	55
5.1	Introduction	55
5.2	Different types of VR headset	57
5.2.1	VR headsets designed for a smartphone	57
5.2.1.1	Cardboard VR headsets	57
5.2.1.2	Smartphone-based headsets with head band	58
5.2.2	Headsets which are intrinsically designed for VR	58
5.2.3	AR headsets	59
5.3	The design of optical system	59
5.4	Display screens	60
5.4.1	Current display screens	60
5.4.2	Future display screens	61
5.5	Head tracking sensor	62
5.5.1	Introduction	62
5.5.2	Mechanical trackers determining an orientation, speed or acceleration	63
5.5.3	Optical trackers	64
5.6	The ergonomic design	65
6	Interfaces used with VR headsets	69
6.1	Introduction	69
6.2	Tracked handheld controllers	69

6.3	1D treadmill and omnidirectional (2D) treadmill	71
6.4	Motion simulator	75
6.4.1	Introduction	75
6.4.2	Motion seats for single-user	75
6.4.3	Motion flight simulators for single-user	76
6.4.4	Full motion simulators	77
7	Functional and technical characteristics of VR headsets	79
7.1	Introduction	79
7.2	Main features	79
7.3	Technical characteristics of VR headsets	81
7.3.1	Smartphone-based headsets	81
7.3.1.1	Generalities	81
7.3.1.2	VR headsets without head band	82
7.3.1.3	VR headset with head band	83
7.3.2	Virtual Reality headsets	86
7.3.2.1	Generalities	86
7.3.2.2	With median field of view	86
7.3.2.3	With a large field of view	89
7.3.2.4	With eye-tracking system	90
7.3.3	Augmented Reality headsets	91
7.3.3.1	Generalities	91
7.3.3.2	With conventional screen	92
7.3.3.3	With optical see-through	92
7.4	Conclusion	94
8	Comfort and health	97
8.1	Comfort and health issues	97
8.2	Introduction to sensorimotor discrepancies	99
8.3	Taxonomy of sensorimotor discrepancies	101
8.3.1	Introduction	101
8.3.2	List of 5 beneficial sensorimotor discrepancies	103
8.3.3	List of 11 disruptive sensorimotor discrepancies	105
8.4	Controlling actions	112
8.5	Psychological problems induced by virtual environments	113
8.6	Optical and ergonomic constraints	114
9	Recommendations and solutions	117
9.1	Observational VBPs	118
9.1.1	Temporal visual-motor discrepancy	118
9.1.2	Temporal-visual discrepancy	121
9.1.3	Oculomotor discrepancy	122
9.1.4	Spatial-visual discrepancy	128
9.1.5	Localisation visual-motor discrepancy	130
9.2	"Unreal observational" VBPs	130
9.2.1	Spatial visual-motor discrepancy	130
9.2.2	Passive visual-motor discrepancy	131

9.3	Navigation VBPs	132
9.3.1	Visual-vestibular (or visual-proprioceptive) discrepancy	132
9.3.2	Temporal visual-vestibular discrepancy	143
9.3.3	Visual-postural discrepancy	143
9.4	Manipulation VBPs	144
9.4.1	Visual-manual discrepancy	144
9.5	Analysis grid for the 32 solutions	145
9.6	Adapting to the virtual environment	148
9.6.1	Levels of adjustment difficulties	148
9.6.2	Levels of user adaptation	149
9.7	Safety rules	150
9.8	Conclusions	151
 Part II VR headset applications		
10	Introduction to applications utilising VR headsets	155
10.1	VR applications for all age groups	155
10.2	Professional applications	156
 11	 Behavioural lab experiments	 157
11.1	How VR headsets change the VR landscape	157
11.2	Walking through virtual apertures	158
11.3	Conclusion	162
 12	 Industrial use of VR headsets	 163
12.1	Introduction	163
12.2	Driving Simulation (DS) and Virtual Reality (VR)	165
12.2.1	Convergence between driving simulation and virtual reality domains	165
12.2.2	Visuo-vestibular conflict	165
12.2.3	Transport delay or response lag	165
12.2.4	Distance, speed and acceleration perception at scale 1	166
12.3	Automotive and aerospace VR applications	167
12.4	Simulation sickness (VRISE)	168
12.5	Space and size perception (scale 1 perception)	170
 13	 Creating digital art installations with VR headsets	 175
13.1	VR headsets in artistic creation	175
13.1.1	Virtual Reality as an artistic medium of creation	175
13.1.1.1	The relationship between the spectator and the artwork in art history	175
13.1.1.2	Virtual Reality in digital art	176
13.1.2	Characteristics of VR headsets in regards to other interfaces for artistic creation	177
13.1.2.1	Isolating the spectator from the real world	177
13.1.2.2	The spectator in an invisible body	178

13.1.2.3	Accepting a virtual body	179
13.1.2.4	Designing interaction with the VR headset	179
13.2	A method to create with a VR headset	180
13.2.1	The Diving Model	180
13.2.2	The Immersion Protocol: Scenography and Storytelling	181
13.2.2.1	Create the real set of the artwork	181
13.2.2.2	Taking into account the exhibition space	182
13.2.2.3	Creating a scenography which helps the transition from the real to the virtual world	182
13.2.3	Presence during the experience: maintaining the relationship	183
13.2.3.1	The different styles of storytelling	183
13.2.3.2	Keep the spectator present in the virtual world	183
13.2.3.3	Playing with the concept of presence	184
13.2.4	The Emersion Protocol	184
13.2.4.1	The last scene: transition from the virtual to the real world	184
13.2.4.2	Back to reality and collecting feedback	185
13.3	Conclusion and future directions	185
14	Conclusion and perspectives	187
14.1	Conclusion	187
14.2	Perspectives	189
